

# Choose ONLY Genuine Compuprint Ribbons!

**ONLY Compuprint high-density ribbons yield a longer life and a darker, consistent print quality.**

Compuprint’s patented ribbon feed mechanism reduces binding and jamming by feeding the ribbon seamlessly through the print cartridge. Third-party ribbons use an accordion style feed mechanism (see Fig. A) that creates an inconsistent print quality, higher probability of jamming and downtime, yields fewer multiform copies, and effects OCR reading capabilities (see Fig. B).

**ONLY Genuine Compuprint ribbons deliver:**

- ✓ Fewer IT Interventions
- ✓ Longer Ribbon Life
- ✓ A Darker, Consistent Print Quality
- ✓ And the Lowest Printing Cost of Any Print Technology

**The use of Compuprint Ribbons is an essential part of maintaining your printer and keeping a valid warranty.** Avoid costly issues with your Compuprint printer by ensuring the use of Genuine Compuprint Ribbons (See Fig. C).

**Genuine Compuprint Supplies are available through:**

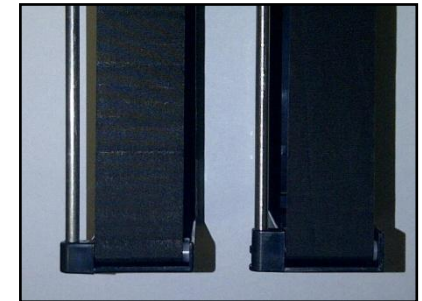

**Figure A:**

Third-Party accordion style ribbons (left) create weak points and creases in the ribbon that negatively effect yield and print quality compared to genuine Compuprint ribbons (right). These weak points can cause the ribbon to rip or snap, rendering the ribbon defective.

**Figure B:**

A closer look at third-party ribbons (left) compared to genuine Compuprint ribbons (rights) reveals a non-uniform inking quality. Some third-party ribbons can be abrasive, shortening the life of your printhead – increasing downtime and service calls.

**Figure C:**

Ensure the best quality and prolong the life of your printer. Only genuine Compuprint ribbon cartridges carry Compuprint’s unique hologram.
